

## Product Description

- ◆ Transistor or MOSFET Output
- ◆ Optical Isolation
- ◆ PCB or Socket Mounted
- ◆ Load Current: 0.1A, 3A, 4A, 6A
- ◆ Load Voltage: 24VDC, 48VDC
- ◆ Dielectric Strength: 2500Vrms
- ◆ RoHS Compliant

Note: (2) For KSMD with control voltage at 12V, 24V, 48V, 60V that operating with the socket, the minimum control voltage should increase 1.4V.

For example, for KSMD24D2-12D, please ensure that the minimum control voltage is 9.6V+1.4V=11V Min

## Wiring Diagram

Note: When the relay is used for inductive load control, please be sure to use a suppression circuit, just like the drawing above. Both load terminals are inverse anti-parallelled with a fly-wheel diode D1. D1: Fast Recovery Diode

## Installation Instructions

### 1. Install the relay

Set the blue clip of socket in the open state (see Figure 1), and insert the relay into the socket cavity (see Figure 2). Then press the relay down until the relay is fully installed in the socket (see Figure 3).

Figure 1

Figure 2

Figure 3

### 2. Remove the relay

Pull the blue clip of socket to remove the relay (see Figure 4-6).

Note: When disassembling the relay, in order to prevent the relay from being ejected and causing it to fall, please be sure to hold the relay and then pull the blue clip to remove the relay.

Figure 4

Figure 5

Figure 6

3. Install the socket

Insert part A of the socket into the din-rail first, and then press the socket down in the direction of the arrow(see Figure 7).

Figure 7

4. Remove the socket

Insert a proper size screwdriver into part B of the socket, turn the screwdriver in the direction of the arrow, and then remove the socket (see Figure 8).

**General Notes**

1. Soldering must be finished within 10 seconds at 260°C, or finished within 5 seconds at 350°C. Otherwise, it may cause damage to the relay.
2. Terminal polarity must be observed. Otherwise, it may cause damage to the relay.
3. When the ambient temperature of the product is high, derate the product according to the temperature curve.
4. Capacitive load will produce very high surge current at the moment of conduction, which may lead to the damage of solid state relay due to the excessive surge current. Therefore, if the actual load is capacitive, or the load has paralleled large capacitance, it is strongly recommended that NTC should be connected in series in the load loop to suppress surge current in order to avoid damage to the product.

**Warnings**

1. The product's may become hot during operation, allow it to cool before touching.
2. Disconnect all power before installing or working with this equipment.
3. Verify all connections and replace all covers before turning on power.
